DETAILED ACTION

EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Examiner amendment addresses antecedent basis issues regarding "instant messaging service computer" and "instant messaging server computer" in the independent claims. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with D. Kent Stier on Oct. 27, 2008.

1. (currently amended) A method for providing an instant messaging communications channel for communication between objects executing within a managed code environment, the method comprising:

registering a first object and a second object as users of an instant messaging server computer;

receiving a request from a first object executing within a managed code environment to transmit data to a second object also executing within a managed code environment;

Art Unit: 2457

in response to the request, transmitting an instant message including the data to the instant messaging server computer, the message being transmitting utilizing one of the MSNP protocol, the RVP protocol, or the SIP protocol;

receiving the instant message at the instant messaging server computer,

authenticating the first object and the second object as registered users of the instant messaging server computer prior to forwarding the instant message to the second object; and

receiving the instant message, extracting the data from the instant message, and presenting the data to the second object.

11. (currently amended) A system for providing an instant messaging communications channel for communication between objects executing within a managed code environment, the system comprising:

an object executing within a managed code environment registered as a user of an instant messaging server computer operative to request the transmission of data to a second object, wherein the second object is a registered user of the instant messaging server computer; and

a remoting system executing within the managed code environment operative to receive the request from the object and, in response to the request, to transmit an instant message including the data to the instant messaging server computer, the

message being transmitting utilizing one of the MSNP protocol, the RVP protocol, or the SIP protocol, wherein the instant messaging server computer is configured to register the object and the second object and authenticate the object and the second object prior to accepting the instant message transmitted by the remoting system.

19. (currently amended) A computer-readable medium having computer-executable instructions stored thereon which, when executed by a computer, will cause the computer to:

register a first object and a second object with an instant messaging server computer, wherein the first object is operative to execute within a managed code environment executing on a first computer and wherein the second object is operative to execute within a managed code environment executing on a second computer;

establish, with the first object, a proxy representing a plurality of methods and properties available to the second object;

receive a request from the first object executing within a managed code environment to transmit data to the second object also executing within a managed code environment;

in response to the request, transmit an instant message including the data to the instant messaging server computer, the message being transmitting utilizing one of the MSNP protocol, the RVP protocol, or the SIP protocol, wherein the instant message comprises a payload containing the data and wherein the payload comprises extensible markup language data formatted according to the simple object access protocol;

receive the instant message at the instant messaging server computer;
authenticate the first object and the second object as being registered with the
instant messaging server computer; and
forward the instant message to the second object.

Allowable Subject Matter

2. Claims 1-6, 8-12 and 14-19 are allowed.
3. The following is an examiner's statement of reasons for allowance. The prior art does not teach nor suggest in detail a method of inter-object communication within a managed code environment that utilizes instant messaging protocols. More particularly, the prior art does not teach a method wherein the objects authenticate themselves to instant messaging servers as registered users prior to data interchange via the instant messaging medium. The dependent claims, which further limit the independent claims, are considered allowable on the same basis.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Clayton R. Williams whose telephone number is 571-270-3801. The examiner can normally be reached on M-F (8 a.m. - 5 p.m.).
